

# **Ultimate Flyer Maker**

Operator User Manual

## Welcome & Overview

Ultimate Flyer Maker helps you produce weekly store flyers. You upload discount lists and product photos, review automated layouts, verify each product, lock every department, then export a PDF.

1. From the Home screen, click **Make a Flyer** to start a new weekly flyer.
2. Follow the progress bar at the top: **Choose Template** → **Upload Discounts** → **All Verified** → **Export PDF**.
3. Work one **department** at a time (e.g. Grocery, Meat, Produce). Each department is a separate draft job.
4. When all departments are locked, export the complete flyer as a PDF.

**Tip:** Your drafts are saved automatically. You can close the app and resume later from the Job Queue.

## Choose a Template

Pick the flyer layout for this week. Built-in templates **Weekly v1** and **Weekly v2** are ready to use for training and production.

1. After clicking **Make a Flyer**, you arrive at the template picker.
2. Click a template thumbnail (**Weekly v1** or **Weekly v2**) to select it.
3. If you see an **Unfinished draft** badge, you can resume work on that template.
4. You are taken to the **Job Queue** for the selected template.

**Tip:** Stick to one template per flyer week. Switching templates starts a separate set of department jobs.

## Job Queue & Departments

The Job Queue shows every department in your template and its status. Set the flyer week, then open each department to upload discounts.

Flyer week: Jun 27 – Jul 3

|                               |                            |
|-------------------------------|----------------------------|
| <b>Grocery</b><br>Not started | <b>Meat</b><br>In progress |
| <b>Produce</b><br>Done        | <b>Frozen</b><br>Locked    |

[Click a department card to upload](#)

1. Confirm the **flyer week** date at the top (defaults to the current cycle's Friday).
2. Review the department cards — statuses include **Not started**, **In progress**, **Done**, and **Locked**.
3. Click a department card (e.g. **Grocery**) to open its upload panel.
4. Repeat for each department you need to fill this week.

**Tip:** Complete departments in any order, but every department on the template must be locked before you can export.

## Upload Discounts & Images

For each department, provide the discount list and optionally product photos. The app parses prices and titles, then queues automation.

Job: Grocery — Week 26

Drop images here

Paste discounts or upload .xlsx

Queue Job

[Provide discounts + optional photos](#)

1. In the job panel, give the job a name if needed and confirm the department.
2. Add discounts by pasting text **or** uploading an `.xlsx` spreadsheet (use **Export Example** if you need the format).
3. Drag and drop product photos (JPG/PNG), or click to browse. Photos help the matcher find the right cutout.
4. Click **Queue Job** (or **Start**) to begin processing.

**Tip:** You can upload discounts only — the pipeline will search for product images automatically when photos are missing.

**Note:** Do not open the editor while a job shows **\*\*Processing\*\*** or **\*\*Queued\*\***. Wait for automation to finish, or click **\*\*Abort\*\*** to cancel.

## Wait for Automation

While a job runs, the app matches products, removes backgrounds, and places cards on the flyer canvas. The editor is locked during this phase.

1. Watch the department card or job panel for progress (e.g. images processed).
2. When processing completes, the job status changes and the department opens in the **Editor**.
3. If a job fails, read the error message and retry with corrected files.
4. Use **Abort** only if you need to stop a runaway job — you will need to re-queue afterward.

**Note:** The editor canvas and toolbar are dimmed and locked while automation is active. This is normal.

## Review in the Editor

Fine-tune product placement, titles, prices, and layout before verification. Switch departments from the toolbar without leaving the editor.

1. Use the **department picker** (hamburger menu) to switch between departments.
2. Open the **Images** panel to browse project images; use **History** to undo steps.
3. Adjust **Rows** / **Cols** / **Flip** for card-based departments when products do not fit.
4. Right-click a product to replace its image, search the database, or edit discount details.
5. Use **Ctrl+C** / **Ctrl+V** to copy and paste product cards; **Ctrl+Z** / **Ctrl+Y** for undo/redo.

**Tip:** Collapse the header (▲) for a larger canvas view while reviewing.

## AI Photo Enhancement

Turn a rough product photo (glare, tilt, cluttered background) into a clean, commercial-looking shot using Gemini AI — one click per product cell, right from the editor.

1. Click a product cell in the editor to select it — a blue outline shows which cell is selected. This works in both general mode and edit mode.
2. A small sparkle button appears on the right edge of the canvas. Click it to open the AI Enhance panel.
3. Leave the text box blank and click **Enhance** for the default result: background removed and replaced with pure white, glare and reflections removed, the product straightened and centered, with bright even lighting.
4. Or click a preset chip (**Remove Glare**, **Straighten & Center**, **Add Soft Shadow**, **Sharpen Label Text**, **Warm & Appetizing**) to load a ready-made instruction into the text box — edit it if you like — then click **Enhance**.
5. You can also type your own custom instruction instead of using a preset.
6. A purple **AI Enhancing...** spinner shows while Gemini processes the photo. The product's photo updates in place when it finishes — no page reload needed.

**Tip:** If a product has multiple flavor/variant photos in one cell, Enhance applies to every photo in that cell, not just the first one.

**Note:** Requires a GEMINI\_API\_KEY configured in Settings or .env. AI Enhance uses your Gemini free-tier image quota, so use it selectively on photos that actually need cleanup rather than on every product.

## Verify Products

Verification is a step-by-step QA pass for every product: title, image, then price. Flag items that need correction before locking.

1. Click ✓ **Verify** in the editor toolbar.
2. For each product, review **TITLE**, then **IMAGE**, then **PRICE** using the step chips.
3. Approve each step or flag an item for follow-up. Edit titles/prices inline when needed.
4. Replace a bad image via database search or Google image search from within the verify panel.
5. When finished, the button shows ✓ **Verified**.

**Tip:** Re-open verification anytime before locking if you make further edits.

## Lock Departments

Locking confirms a department is complete. All departments on the template must be locked before export is enabled.

1. After verification, click **Lock Department** in the editor toolbar.
2. The button turns red ( **Locked**) when locked. Locked departments cannot be cleared or re-edited without unlocking.
3. Switch to the next department and repeat: upload → process → edit → verify → lock.
4. Return to the **Job Queue** to see which departments still need work.

**Note:** Unlocking a department allows edits but removes it from export readiness until you verify and lock again.

## Export PDF

When every department is locked, export the full flyer as a PDF file.

1. Confirm the workflow bar shows **All Verified** (step 3) with all dots green.
2. Click **Export PDF** on the workflow bar or use the export action on the Job Queue.
3. Wait for **Preparing flyer for export** and the progress indicator to complete.
4. Save the PDF to your chosen folder when prompted.

**Tip:** Exported PDFs are rasterized images — they are print-ready but not editable vector files.

**Note:** Before exporting: all template departments must be locked; do not clear the cutout cache while jobs are open.
